

Would you like to know more about how your baby breastfeeds?

Our *Human Lactation Research Group* is investigating how babies coordinate sucking, swallowing and breathing during breastfeeding.

We invite fully breastfeeding mothers and their healthy term babies under 5 months of age to attend a study session at King Edward Memorial Hospital.

During a breastfeed we:

- * observe tongue movement using ultrasound, and
- * measure sucking, swallowing and breathing

The study session lasts 60 – 90 min
